Fengjiao Yang

Applying for a Visiting Ph.D. Student Position with External Funding (CSC Scholarship)
Phone: (+86) 18865775511 | Email: 25115084@bjtu.edu.cn | Website: https://yangfengjiao99.github.io
Address: No.3 Shangyuancun, Haidian District, Beijing, China

RESEARCH INTEREST

Cloud Computing, Cloud Workload Forecasting, Time-Series Forecasting, Large Language Models for Time Series, etc.

EDUCATION

Beijing Jiaotong University — **Beijing, China**

Ph.D. student of Science in Computer Science and Technology — Sep. 2025-Present

- Members of Key Laboratory of Big Data and Artificial Intelligence in Transportation, affiliated with Beijing Jiaotong University and the Ministry of Education

Supervisor: Prof. Ding Ding

Dalian Jiaotong University — **Dalian, China**

Master student of Science in Software engineering — Sep. 2022-June. 2025

Supervisor: Prof. Xinying Chen

Shandong Youth University Of Political Science — **Jinan, China**

Undergraduate of Science in Computer Science and Technology — Sep. 2018-July. 2022

RESEARCH EXPERIENCE

[1] Fengjiao. Yang, Ding Ding, et al. Multi-Scale Driven Spatio-Temporal Diffusion Model for Cloud Workload Forecasting. (Under Review)

• Proposed a multi-scale diffusion framework with hierarchical variance scheduling for cloud workload forecasting. Dynamic fusion coefficients enable large scale trends to progressively guide denoising at finer scales, improving forecasting stability and accuracy.

• Developed a lightweight spatio-temporal fusion module to capture temporal dependencies and inter-task spatial correlations. A TCN further enhances temporal feature extraction, providing effective conditional guidance while improving forecasting accuracy and training efficiency.

[2] Fengjiao. Yang, Ding Ding, et al. STLoad: LLM-Empowered Cross Task Alignment for Short Term Cloud Workload Forecasting. (Under Review)

• Proposed STLoad with a cross-task label-aware time-series contrastive loss to transfer semantic knowledge and temporal patterns from long-term tasks to short-term tasks, mitigating data sparsity and improving forecasting accuracy.
• Developed a dual-branch feature extraction module combining Mamba and LLM encoders to jointly capture temporal dependencies and high-level semantic features.
• Introduced a time-frequency residual fusion strategy to preserve short-term task dynamics and mitigate bursty prediction errors caused by excessive feature alignment.

[3] Xinying. Chen, **Fengjiao. Yang**, et al. Research on stock prediction based on CED-PSO-StockNet time series model[J]. Scientific Reports, 14(1): 27462, 2024.

ACADEMIC SERVICE

- **Reviewer** for IEEE Transactions on Knowledge and Data Engineering (TKDE).

REWARD

- First-Class Scholarship of Beijing Jiaotong University, 2025.
- Excellent Master Graduate, Dalian city, 2025.
- Excellent Master Graduate, Dalian Jiaotong University, 2025.
- Outstanding Scholarship of Master, School of Software Engineering Dalian Jiaotong University, 2022, 2023,2024.
- Excellent Bachelor Graduate, Shandong Province, 2022.
